I am testing datetime.timedelta module in python3.4.3. I add some values in timedelta, but its not working as I expected. from datetime import datetime from datetime import timedelta d = datetime(1900,1,1) today = d+timedelta(days=1) print("Today is {}".format(today)) def test(): today = d+timedelta(days=1) print("today is {}".format(today)) test() Output: today is 1900-01-01 00:00:00 Today is 1900-01-01 00:00:00 Expected output: Today is 1900-01-01 00:00:00 today is 1900-01-01 00:00:00 A: The default value for timedelta is 0. Timedelta objects represent a date and time interval. They are used to define date and time arithmetic operations. They use a standard computer format specified in the datetime module, with d representing a day, t representing a minute, and s representing a second. The value of a timedelta represents the number of seconds between that object and a reference date. The reference date is usually today, unless otherwise specified (for example, using the day parameter). You can
